Time to Prepare for Winter Heating Season; Energy Prices Forecast to Remain Stable This Winter

ATLANTA, October 22, 2013 – The Georgia Public Service Commission reminds consumers it is time to begin preparing for the upcoming winter heating season by ensuring their heating systems are ready, checking current natural gas plans and becoming knowledgeable of their rights and responsibilities when it comes to paying those winter heating bills. “Now is the time for Georgians to prepare for the upcoming winter season before the cold temperatures are upon us,” said Commission Chairman Chuck Eaton.

The Georgia Public Service Commission urges consumers to look into budget billing plans and compare marketer pricing options. The Commission anticipates that natural gas costs for the average residential natural gas customer this winter heating season will be about the same as last year. It’s important to note, however, that this forecast is based on normal winter weather. As is always the case, weather has the potential to play a big role in what actually ends up happening because it can drive natural gas costs and your winter heating costs up or down. A colder than normal winter means your furnace will be running more and you’ll be using more natural gas. However, a milder than normal winter means your furnace probably won’t be running as much and you’ll actually use less natural gas.

The Commission does not regulate the price of natural gas. Natural gas marketers in the Atlanta Gas Light delivery area which serves approximately 1.5 million customers are allowed to set prices according to market conditions. Natural gas prices charged by marketers can change on a monthly basis for variable rate plans. Liberty Utilities, which serves customers in Columbus and Gainesville, is allowed to recover the cost of natural gas on a dollar for dollar basis.

Remember, a number of factors can influence wholesale natural gas prices:

- Amount of natural gas in storage.
- Mild or colder than normal winters that contribute to reduced or increased consumption.
- Natural gas is increasingly used year round at newer combined cycle base load electric generating power plants.

In order to help consumers prepare for the winter heating season the Commission offers the following consumer fact sheet.

CONSUMER FACT SHEET

Georgia consumers can take a number of steps to reduce the impact of winter heating costs. They include:

Budget Billing: Consumers who are on a budget, retired or on a fixed income may find budget billing to be an attractive payment option. It allows consumers to make levelized monthly payments on their bills,

and is available whether consumers have fixed or variable rate plans. Budget billing can help consumers avoid the spikes in their winter heating bills.

Energy Conservation: Conservation is vital to any plan of action to lower one's monthly utility bill. Purchasing energy-efficient equipment such as a furnace, hot water heater and/or stove, caulking around doors and windows, insulating walls, floors and the attic, are some things consumers can do to lower their winter heating bills. Of course, if you don't need to have any of your equipment replaced, be sure to have these inspected by a professional to insure operation at maximum efficiency.

Weatherization: Weatherization assistance for low-income families is available in Georgia. This assistance is offered through a program administered by the Georgia Environmental Finance Authority. For information on weatherization assistance go to: <http://www.gefa.ga.gov/> or call 404-584-1000.

Low Income Assistance: Low income consumers may qualify for assistance with their heating bills through the Low-Income Home Energy Assistance Program (LIHEAP). It is administered by the Georgia Department of Human Services who distribute this federal grant money through local community action agencies. Information about LIHEAP is available at <http://www.dhs.ga.gov/> or by calling 404-656-2323 or 1-800-869-1150 outside metro Atlanta.

Consumers may also be eligible for assistance through other programs sponsored by their local utilities or social service agencies. Natural gas customers may be able to obtain help through H.E.A.T. Inc at www.heatga.org or 678-406-0212. Natural gas and electric customers may also contact Project SHARE which is operated through the Salvation Army at 800-25-SHARE. You must apply through the local SHARE Partner Agency.

It is also a good time to see if you're getting the best value for your dollar. The Commission publishes a monthly price-comparison chart of all natural gas marketers' plans – senior, variable, fixed and pre-pay. Check the price you pay your marketer with the price of other marketers to see whether it is in your best interest or not to change to another marketer. Also, the Regulated Provider is available to serve low-income citizens and those who are not able to obtain service from any of the certificated marketers in Atlanta Gas Light Company's service area.

For more assistance, visit our website, www.psc.state.ga.us, to get information to help you manage your utility bills, to assist in selecting a natural gas marketer, and to get additional conservation tips.
